

A bold project to phase out fossil fuels and support a global just transition

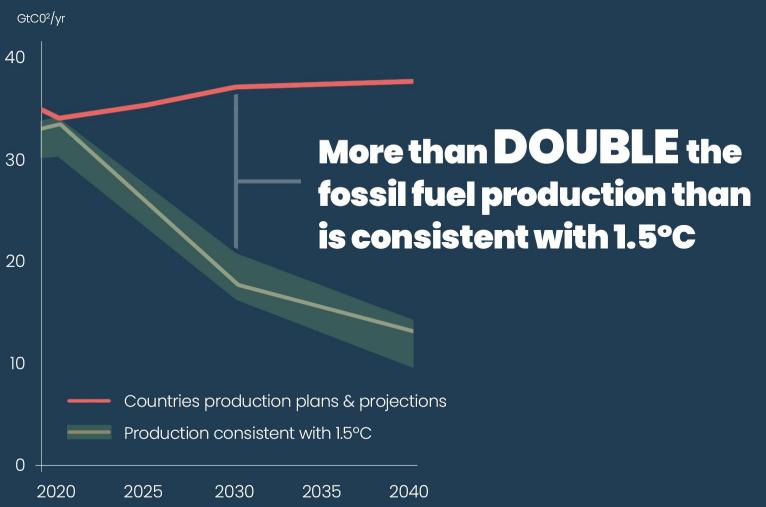

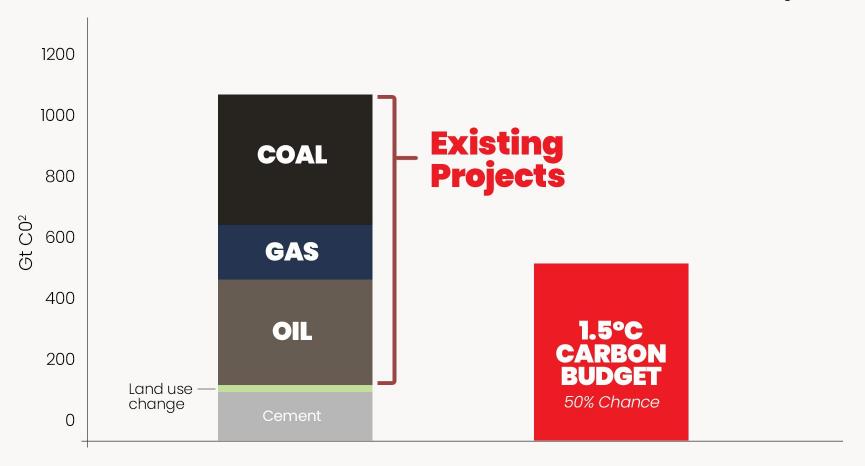

Climate Change Greatest Global Threat

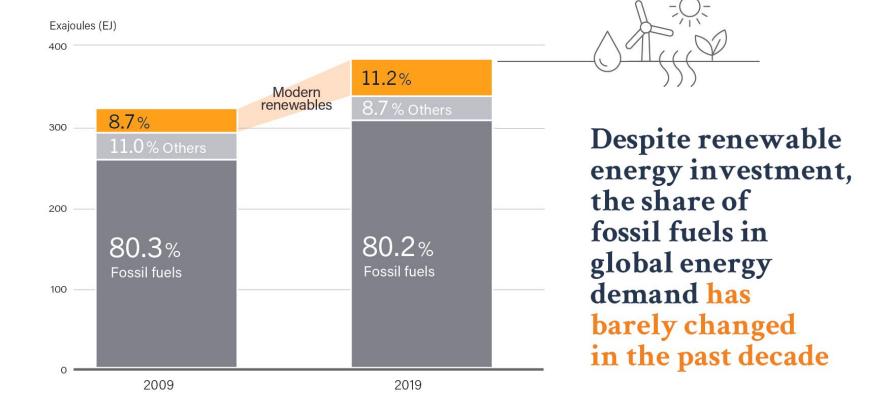

Lack of action to address climate change is now the greatest threat facing humanity, calling for an international response.

Source: WEF Global Risks Perception Survey 2019-2020

Every supplier wanting to squeeze out the last drop and nobody wanting to be stuck with the costs.

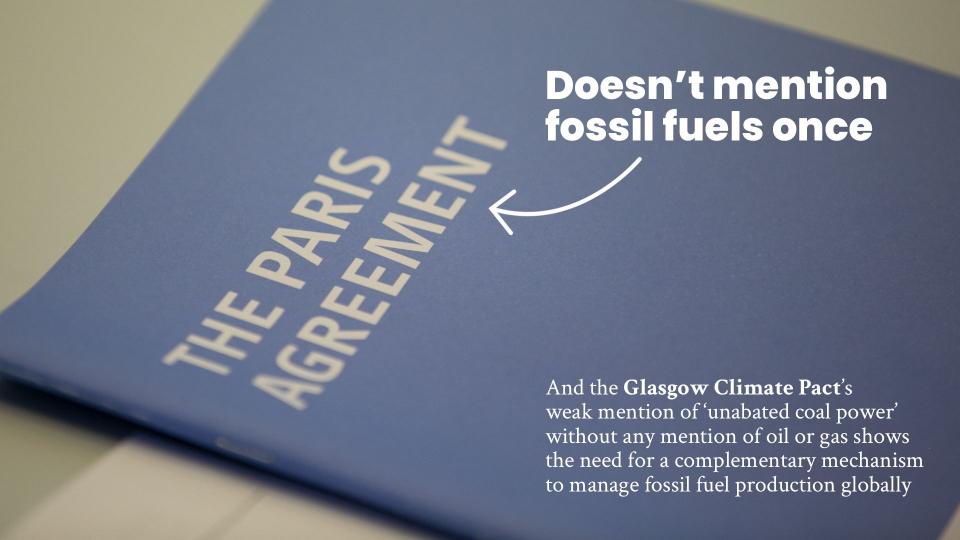

If there is no global governance of fossil fuel production exit then:

- It makes the inevitable transition **harder**
- It creates **stranded assets** and risks **financial turmoil**
- It increases **risks to workers** and communities
- It delays renewable energy expansion
- It **delays economic diversification** into more sustainable sectors
- It consolidates powerful **pro-fossil fuel political constituencies**
- It increases risk of technical, economic, legal and political **lock-in**
- It increases the risk of dangerous geo-engineering
- It risks warming well **above 1.5°C and 2°C**

This report must sound a death knell for coal and fossil fuels, before they destroy our planet.

- UN SECRETARY-GENERAL ON THE IPCC REPORT

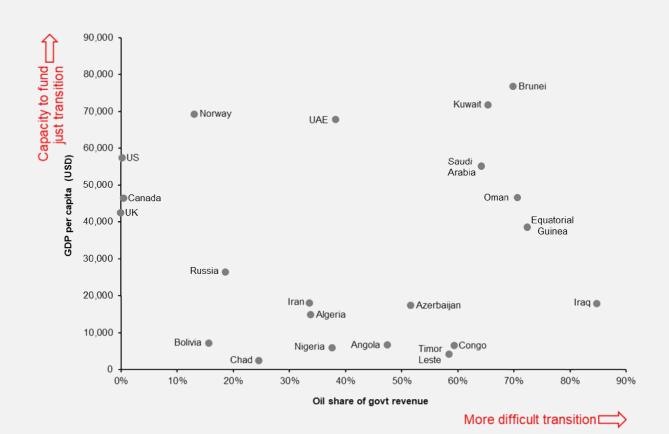

The need for international cooperation

Countries capacity to phase out fossil fuels and difficulty in transitioning varies greatly globally.

Many countries face capacity constraints and can't undertake the transition on their own, others are in a position to transition first and fastest.

International cooperation is essential to manage this transition in a manner that is fast and fair. Yet there is currently no international mechanism to manage that cooperation.

Non-proliferation

Don't add to the problem.

End new exploration and
expansion into new
reserves.

Reduce the existing threat. Equitably phase out existing stockpiles and production in line with 1.5°C.

+

A Just Transition

+

Accelerate an equitable transition. Increase access to renewable energy & other low carbon solutions.

Develop just transition plans.

Fossil Fuel Non-Proliferation Treaty

Facilitating a rapid, coordinated, transparent and equitable transition away from fossil fuels

Nuclear Weapons treaties as a model

Treaty on the Non-Proliferation of Nuclear Weapons (NPT) (1968)

3 pillars:

- Non-proliferation =
 ending fossil fuel exploration
- **Disarmament** = phasing-out production
- **Peaceful transition** = fast-tracking clean energy and a just transition

Treaty for the Prohibition of Nuclear Weapons (2017)

- Massive global civil society
 movement
- Momentum driven by smaller,
 non-nuclear states demonstrates
 ability of non-nuclear powers to
 change global norms & create
 reputational pressure
- ICAN winner of Nobel Prize

Our objectives

Change global norms on fossil fuels by demonstrating widespread action on fossil fuel supply

Motivate cities and states to endorse the Treaty and phase out coal, oil and gas in their local areas

Provide the missing framework and mechanism for a multilateral agreement for a just transition

Increase transparency and accountability by developing research on fossil fuel expansion

Grow the global movement for a just energy transition by centering equity demands and analysis and leading with solutions

Complement frontline and finance campaigns with a unifying political demand that is commensurate with the scale of the challenge

Who we are & what we do

We are a directed network - guided by our global Steering Committee.

We work in collaboration with a diverse range of partners and other foundations. Over 1,500 organisations have endorsed from climate, Indigenous Peoples, youth, faith, health, gender, human rights, unions and other constituencies, spanning global networks like 350.org and Friends of the Earth to local groups, and 30+ cities such as Sydney, Los Angeles and Barcelona.

We have a small international support team that supports and collaborates with partners to undertake:

- Regionally (e.g. Asia) and constituency (e.g. Youth, Faith)
 relevant campaigns and endorsement outreach
- Cities campaigning
- Media and communications
- Research, analysis and academic collaborations
- Political advocacy and government engagement

Just Transition

- Phasing-out fossil fuels will affect **all aspects** of modern life
- How we manage the transition will determine if we worsen today's injustices, or if we make sure we build a fairer and better world?
- Responsibility for the climate emergency from the richer countries means they need to phase out sooner from fossil fuels but also support financially and technically the transition of poorer countries
- Human rights must be at the centre, including worker rights

Workers and unions

- Are leaders of social change
- Will also need training support and good working opportunities
- Engagement of unions and workers in the process as well as indigenous peoples, youth, fossil fuel affected communities will be essential to ensure the transition is just.
- Need for organizing to secure demands are met for social protections

There is no *one* path for the just transition, we need to work together on the Principles that will ensure the conditions are there for countries and communities to build what it looks like in different parts of the world.

In one year we...

Grew our team from 4 to 40 people located in 15 countries

Met with officials from at least 40 countries

Built the capacity, experience, and network of 1,500+ organisations, on every continent

Established formal partnerships with **12** organisations

Convened 4 high level meetings, in partnership with the Stanley Centre

Conducted message testing in 5 countries with 8.7 million impressions

Theory of change

Building a **directed network** calling for a Fossil Fuel Non-Proliferation Treaty centered on:

- **Establishing enabling conditions for a global movement**: Networking environmental, faith, peace and security, youth, indigenous, and women's groups in all regions of the world
- **Shifting the narrative:** Developing sophisticated place-based communications strategies on the need to phase down fossil fuels centering on risk and opportunity
- **Enhancing accountability and transparency**: Creating a new global benchmark for open and transparent data on fossil fuel production
- **Demanding a globally just transition**: Calling for a fair phase-down and convening stakeholders around key issues such as debt, equity and supply side policy options
- **Increasing political pressure from below**: Engaging cities and other sub-national actors to put pressure on governments
- **Increasing political pressure internationally**: Encourage political engagement of first mover countries at international level and new diplomatic initiatives
- **Building the evidence base**: Developing global and regional research on fast tracking the transition from fossil fuels, supported by research community of practice
- Complementing other theories of change and strategies (front-line, financial, other)

Diplomatic Engagement

- Club of Countries: initial focus on those who may champion the club, ie those prepared to make international demands for cooperation, countries looking to the future role of coal, oil, and gas in their economies, and countries particularly vulnerable to climate impacts.
- Global Registry of Fossil Fuels: key to propelling supply side into international public policy discourse; transparency and accountability are key hooks; want to see this taken up this year.
- **Global Commission on Fossil Fuels:** or a formal UNSG report would be major stepping-stone along the pathway of international and stakeholder co-operation, to build the case and support for a global treaty.
- Global treaty and regime that: 1) ends new exploration and production; 2) phases out existing stockpiles and production; 3) accelerates solutions for a managed and just transition.

Our network directly influenced major global summit, making it the first UN conference to clearly recommend the "phase out of all fossil fuels" and to recognise the urgent need for "financial and technical support to realize a just transition."

Building the evidence base

Treaty Research Agenda

- Engaging leading academics and regional- and national-level experts and partners
- Building the evidence-base and underpin political, campaign and comms strategies
- Focusing on international cooperation and fossil fuels
- Strengthening a research community of practice
- Filling gaps in existing literature through new collaborative and commissioned research
- Amplifying new research outputs and contribute to changing narrative of fossil fuels globally

Three intersecting dimensions

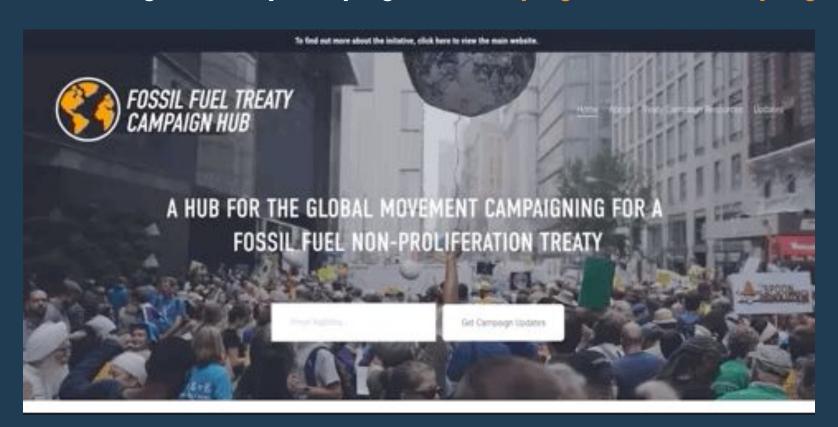

- A global research stream is focused on strengthening political advocacy, enabling an equitable phase-out of fossil fuels, and enhancing international cooperation among states.
- A regional research stream is focused on ways to strengthen action in key global regions and country groupings, while deepening cooperation among researchers and advocates in different geographies
- A thematic research stream is focused on key cross-cutting topics of relevance to the global and regional agendas

The research programme is overseen by the **Research Working Group**, and will be informed by a wider **Research Network** of interested academics and experts

Campaign & Comms

Introducing the Treaty Campaign Hub campaign.fossilfueltreaty.org

What can you do?

Endorse as an organisation at www.fossilfueltreaty.org

Promote the Treaty concept e.g. share this video

Call on cities in your region to endorse

Join a constituency-specific tactic – active statements calling for a Treaty from youth, <u>faith</u>, <u>academics</u> and health (coming soon)

Invite nationally-elected officials to join the **Parliamentarians for a Fossil Fuel Free Future**

Learn more, endorse the Treaty and join the campaign:
